AutoAgentAI

AutoAgent & Customer-Integrated Custom Insights into Purchase, Overall Behaviour & Decision Making — **Executive Summary**

> An autonomous AI agent that captures and uses the **most valuable, least-captured data in the car industry** — the buyer's real pre-purchase intent and decision behaviour — running **privately on-prem on local AI models**, and **closing the loop from the showroom floor to the OEM**.

THE PROBLEM

Buying a car is a huge, considered, emotional decision — yet the data on *why* buyers choose, hesitate, or walk is almost entirely uncaptured, because it's structurally impossible for salespeople to capture. The industry runs on memory, sticky notes, lagging sales numbers, and survey-with-a-prize guesswork.

WHY NOW

Three curves crossed at once: **agentic AI** can finally capture and reason over this signal; **open local models** make it private and cheap enough to run on-prem; and **tightening privacy law** makes sovereign, on-prem data the only durable way to hold it.

WHAT IT IS

One agent across four jobs — unify customer data, model behaviour, generate custom insights, and act — delivered through McDonald's-style kiosks and iPad nodes, on the dealership's own hardware so **customer data never leaves the building**.

THE WEDGE

This data tops every value driver: huge stakes per decision, a lifelong repeating relationship, real decision signal (not vanity metrics), near-total scarcity, and value at **every** level — salesperson, dealer, group, and OEM.

THE MOAT

The AI is commodity; defensibility is **capture + privacy + the loop** — the on-floor footprint that captures the signal, the on-prem posture that can legally hold it, and the aggregated OEM feedback loop that compounds as it scales.

IMPACT ON THE FLOOR

Fewer leads lost; reps who know the customer before they walk up; more trade-ins and service retention; and a role that shifts from pressure-and-admin to **assurance and assistance** — a leaner, sharper, agent-amplified team.

BUSINESS MODEL — FOUR TIERS AS A PRICING LADDER

Tier 0 · Cloud	Tier 1 · Local Essentials	Tier 2 · Local Pro	Tier 3 · Enterprise
Low-cost pilot. Cheap, fast — not PII-compliant. Land here.	One on-prem node. Private. Single rooftop.	GPU server. Full dealership load. Private.	GPU cluster, HA. Dealer group / multi-site.

Revenue: setup/hardware · recurring license per site/seat · group contracts · OEM-facing insight product.

STATUS & THE ASK

Concept & documentation complete. Next: specifications + a measured design-partner pilot.

Capital
A round *(amount to confirm)* to fund Phase-1 specs and a Tier-0/1 pilot proving conversion, trade-in & retention lift vs. a holdout.

Design-partner dealer
One rooftop to run the pilot and share outcomes — they get the lift and first-mover advantage.

OEM introduction
A manufacturer contact to scope the aggregated, anonymized buyer-intent feedback loop.
